

Curriculam Structure

of

BS program in Management and Technology (online/off-campus program)

School of Management and Entrepreneurship, IIT Jodhpur

B.S. in Management and Technology

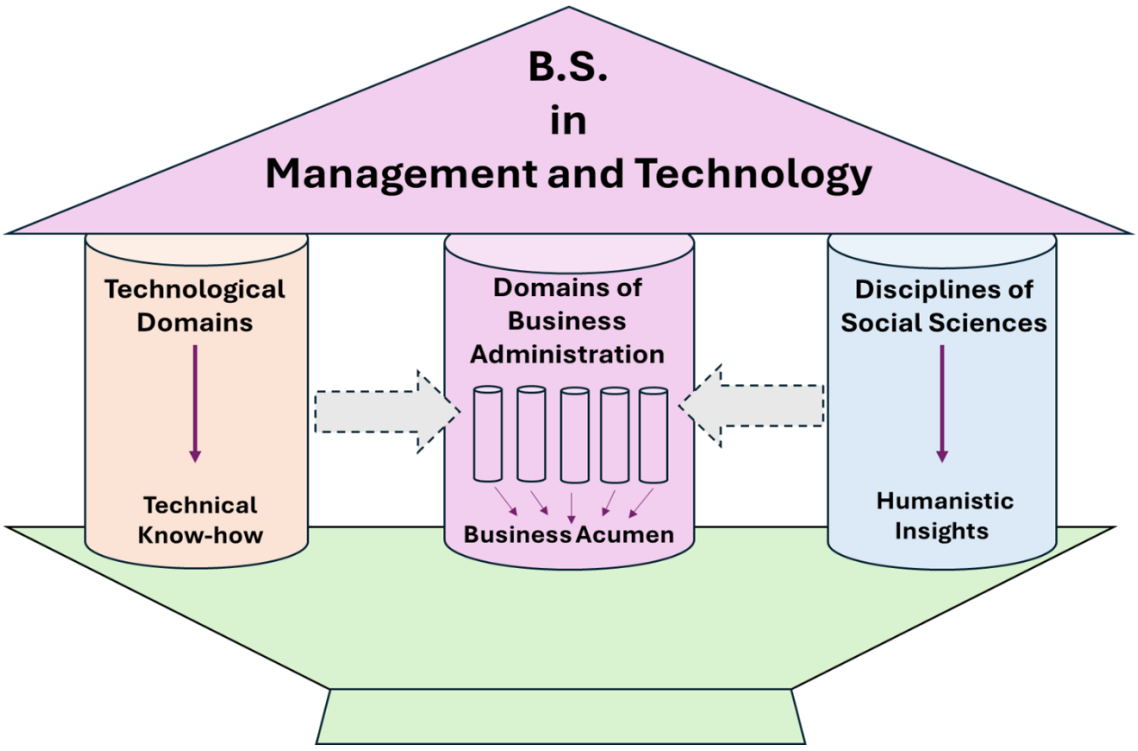

Concept Note

Four-year, Online and Blended Undergraduate Program, offered by*

(*Blended in terms of Synchronous and Asynchronous Delivery)

Underlying Philosophy of the Program

IIT Jodhpur's new four-year B.S. in Management and Technology is driven by the idea that today's world doesn't just need specialists with myopic vision. What we really need are managers who can bridge disciplines to lead in high velocity environments wherein technological, business and socio-political domains converge. To solve the pressing problems facing the world, we believe that grand challenges of tomorrow will require mangers to blend three aspects into everything they do - humanistic insight, technological know-how, and business acumen. Therefore, the program is based on three pillars constituting domains of technology, social sciences and business administration ***[figure 1].***

The programme's foundation in social sciences ensures that students begin with broad exposure—ethical reasoning, human values, history, communication, critical thinking, social contexts—that ground their understanding of business in human societies. From there, technology management courses serve to link emerging tools, digital platforms, data, AI, innovation and systems thinking to managerial challenges, enabling students to understand *how* technology transforms markets, work, and institutions.

Furthermore, study of business management functions — marketing, finance, human resources, operations, strategy — provides the operational toolkit: students learn both theory and practice of how firms create value, allocate resources, manage people, and understand customers. Meanwhile, skilling courses (written and oral

communication; reading and crafting capabilities;) ensure that graduates are not only intellectually well-rounded, but also possess the practical competencies required in real workplaces.

The philosophy of this undergraduate program, thus is integrative: to produce agile, ethical, and socially conscious managers who can operate at the intersection of technology, business, and society; to foster adaptability, problem solving, lifelong learning; and to prepare students for diverse roles — whether in established firms and business groups; startups, policy think tanks, or further studies — empowered with both depth and breadth.

Program Objectives

1. To prepare students for leadership, innovation, and entrepreneurship with a focus on sustainability, ethics, and global business perspectives.
2. To provide students with a strong foundation in economics, business history, and social sciences for nuanced understanding of management in diverse contexts.
3. To equip students with modern technological, analytical, and data-driven tools for effective business decision-making.
4. To foster interdisciplinary knowledge across marketing, finance, operations, HR, and strategy for well-rounded managerial competence.

Learning Outcomes from the program

1. Students will demonstrate the ability to analyse economic, social, and business issues using critical and creative thinking skills.
2. Students will apply data analytics, AI, and digital economy tools to solve real-world business problems.
3. Students will integrate knowledge from marketing, finance, operations, HR, and strategy to design and implement business solutions.
4. Students will exhibit ethical awareness, global perspective, and entrepreneurial orientation in managerial decision-making.

Graduate Outcomes

Year	Graduate Outcomes
At the end of year 1	Basic understanding of fundamentals of business management with and appreciation of role of technology and social sciences.
At the end of year 2	Integrated understanding of various management domains and implications of technology and social sciences.
At the end of year 3	Holistic managerial understanding across multiple functional domains and its integration with advanced technology applications.
At the end of year 4	Specialized and in-depth understanding of a functional domain of business with role of emerging business technologies.

Curriculum Structure

The curriculum is designed to provide a **broad foundation** in management, technology, and social sciences, with exposure to domain specialized courses. Course and credit distribution is noted in Table 1 where each course is 3-credits. Overall, the BS program shall comprise total of **47 courses** covering **141 credits** over **8** semesters.

Table 1: Curriculum Structure

S.No.	Nature of Courses	Number of courses	Credits per course	Total Credits	Weightage
1	Management Foundation Courses	20	3	60	42.6%
2	Technology Courses	9	3	27	19.1%
3	Social Science Courses	9	3	27	19.1%
4	Advanced Courses	9	3	27	19.1%
Total (1 + 2 + 3 + 4)		**47**	**3**	**141**	100%

Semester-wise breakup of credits

The BS in Management and Technology follows a semester-wise structure spread over 8 semesters ***[Table 2]***. In the first three years, students build a strong foundation in management, social sciences, and technology. In the final year, students go through domain specialized courses to deepen their understanding of business domains. In total, the curriculum comprises **141 credits**, carefully balanced across 8 semesters to ensure both foundation and applied experience.

Table 2: Semester-wise credit structure

Year	Semester	Number of courses	Total credits
1	1	6	18
	2	6	18
2	3	6	18
	4	6	18
3	5	6	18
	6	6	18
4	7	6	18
	8	5	15
Total			**141**

Table 3: Domain-wise courses

S. No.	Technological Domains	Social Sciences Domain	Domains of Business Administration				
			Marketing	HR	Operations and IS	Finance and Accounting	Entrepreneurship and Strategy
1	Foundations of Computing	Economic and Business History	Principles of Marketing	Micro Organizational Behavior	Statistics for Managers	Financial Accounting	Foundations of Entrepreneurship
2	Algorithmic Thinking in Business	Microeconomics	Consumer Behavior in Marketing	Macro Organizational Behavior	Optimization Techniques in Management	Cost Accounting	Design Thinking in Business
3	Database Management Systems	Macroeconomics	Nurturing and Managing Brands	Human Resource Management	Business Research and Analysis	Financial Management - I	Competition and Strategy
4	Machine Learning in Business	Introduction to Sociological Thought	Digital Marketing Analytics & Optimization	Human-AI Collaboration at Work	Operations Management for Managers	Financial Management - II	International Business
5	AI Applications in Business	Introduction to Psychology	Marketing of Services		Digital Enterprise Management	Money, Banking and Financial Markets	Leadership and Corporate Governance
6	Visualization and Storytelling of Business data	Environment Sustainability and Business			Technology Forecasting and Assessment	Introduction to FinTech	Strategies for Firm Growth
7	Generative and Agentic AI in Business	Indian Management Systems			Project Management		
8	Industry 5.0	Digital Economy			Supply Chain Management		
9	Big Data and Cloud Computing	Legal Aspects, taxation and IPR

4	Optimisation Techniques in Management	MSL2XXX	3-0-0 [3]	**Total Program credits**			**141**

Programme Eligibility

Essential Education Qualification

- Candidates must have successfully completed 10+2 or equivalent from a recognized board.
- Minimum aggregate of 60% marks (or equivalent CGPA) in 10+2 examination.

Desirable

- Mathematics at the 10+2 level is desirable for proper grasp of quantitative and technology management courses.

Selection Process

- Shortlisting based on academic qualifications and performance in a qualifying test (JEE Main/CUET-UG/Entrance Test).

Proposed Intake

- Academic year 2026-27: Minimum 500 students per cohort. 2 cohorts per year

Grading, GPA and CGPA Criteria

- Guidelines of B.S. programs at IITJ will be followed

Stackable Programme Structure (NEP-Aligned)

The B.S. in Management and Technology (Online) follows a multi-exit, stackable model *[Table 4]* aligned with the National Education Policy (NEP 2020).

Table 5: Exit Pathways

Exit Level	Academic Award	Credits Earned	Duration	Indicative Outcomes
Year 1	Certificate in Business Fundamentals	36 credits	2 Semesters	Basic understanding of fundamentals of business management with and appreciation of role of technology and social sciences.
Year 2	Diploma in Management & Technology	72 credits	4 Semesters	Integrated understanding of various management domains and implications of technology and social sciences.
Year 3	Bachelor of Science (3 years) in Management & Technology	108 credits	6 Semesters	Holistic managerial understanding across multiple functional domains and its integration with advanced technology applications.
Year 4	Bachelor of Science (4 years) in Management & Technology	141 credits	8 Semesters	Specialized and in-depth understanding of a functional domain of business with role of emerging business technologies.

Online Modalities, Faculty Live sessions and Doubt clearing sessions

- 1 credit is equal to 13 sessions of 50 minutes each. So, a 3-credit course shall amount to 39 sessions of 50 minutes each.
- Primary delivery of the courses will be in asynchronous mode, wherein pre-recorded content by faculty will be provided to students.

- **Faculty Live sessions**
  - **Flipped classroom:** For each 3-credit course, there will be 13 live sessions of 50 minutes each, scheduled on weekends, **delivered by IIT faculty.**
  - **Proprietary Case Studies** material will be distributed to students so that they pre-read the case before the live sessions for fruitful discussion in online mode.

- **Doubt-clearing sessions**
  - 13 sessions of 50 minutes each, for every course - taken by Teaching Assistants**.**

- **Campus Immersion**
  Twice (optional)

Agenda

New UG core courses

for

BS in Management and Technology (Online) Program

School of Management and Entrepreneurship, IIT Jodhpur

Background

SME is starting a new UG program, BS in Management and Technology in online mode which has been approved in 44th Senate meeting. This will be the first UG program from SME.

In the **first semester**, there are six core courses (PC) of 3 credits each, which will be 100 level courses. The course outlines have been developed by SME faculty and have been discussed in SFB and recommended by School Faculty Board. Thereafter, they were sent to external experts and based on comments received, it has been revised. Updated outlines were submitted to SOEC for deliberation and were recommended. Since this is a new program to be launched in August, recordings need to start in June for 1st semester courses. The campaign in collaboration with a partner is already running to generate leads for admission offers.

The detailed outlines are submitted for approval to Senate.

The list of six graded core courses of three credits each are as follows:

Semester 1		
Type	**Course Name**	**Credits**
PC	Economic and Business History	3-0-0
PC	Principles of Marketing	3-0-0
PC	Foundations of Computing	3-0-0
PC	Financial Accounting	3-0-0
PC	Statistics for Managers	3-0-0
PC	Algorithmic Thinking in Business	3-0-0

Outlines and Checklists are provided in the annexure -1 below. Annexure-2 covers Senate approved concept note and curriculum structure of the program.

Annexure 1: Course Outlines and Checklists

Course Title	Financial Accounting	Course No.	MSL1xxx
Department	SME	Structure (L-T-P [C])	(3-0-0[3])
Offered for	BS in Management and Technology	Type	Core
Prerequisite	NA		

Objectives

The course provides students with the necessary coverage of financial accounting. It is to inculcate an intermediate level of understanding of accounting principles & policies, preparation of financial accounting numbers, their interpretation, and to develop skills in reading annual reports among the students. The objective of the course is also to acquaint students with key financial accounting standards and reporting practices, with emphasis on sound concepts along with their governance-related implications.

Learning Outcomes

- Imparting students an understanding of the nature of accounting and its role in business decision making.
- Prepare and comprehend the financial statements of the firms.
- Analyse the financial statements to interpret and draw useful managerial information.

Contents

1. **Introduction**: Accounting as the language of business; accounting concepts & convention, users of accounting information; overview of financial statements **(6 Sessions)**
2. **Accounting Records and System**: Journal entries, T-accounts, ledger, trial balance; adjusting and closing entries; preparation of financial statements; the accounting cycle **(8 Sessions)**
3. **Balance Sheet and Income Statement**: Elements and structure of the Balance Sheet; recognition and classification of assets and liabilities; Income Statement; principles of accrual accounting; revenue and expense recognition **(8 Sessions)**
4. **Cash Flow Statement and Operating Activities:** Need and format of the cash flow statement; operating, investing, and financing activities; direct and indirect methods; receivables and revenue recognition; inventories **(9 sessions)**
5. **Long-lived Assets and Financial Statement Analysis:** Property, plant, and equipment; depreciation and amortization; understanding of annual reports **(8 Sessions)**

Financial Accounting

Checklist for the new course approval

1. **Justification for the proposal in line with the philosophy of the program**
   This is a core course in the newly launched program: BS in Management Technology in online mode. Its curriculum structure has been approved by the Senate in March 2026.

2. **Total number of electives in the department/Centre/School already approved by the Senate.**
   Currently, at UG level, there are ***no*** 100 level courses offered by SME, since there is no ongoing UG program. This course will be floated in the first semester.

3. **Name of faculty members who will teach the proposed course**
   Dr. Manisha Yadav and Dr. Seema

4. **If the course involves a lab component, please confirm whether adequate infrastructure resources are available to run the laboratory successfully.**
   NA

5. **Experts comments on the proposed courses**

Name of the expert	Designation of the expert	Comments received	Action Taken
Dr. Thenmozhi M	Professor	The content is fine for the course.	NA
Dr JP Singh	Professor	Here are my suggestions on financial accounting syllabus: 1.Please include Accounting Concepts & Conventions in Topic No 1. Increase the allotted time to 8 hrs. 2. Before you teach the Balance Sheet & Income Statement, you must cover the Accounting Cycle (Journal Entry, Ledger Posting & Trial Balance). This may take about six/eight lectures as mentioned in topic 3. You have put it after the Balance Sheet. I think it should be before Balance Sheet.	Suggestions have been incorporated

		3. Shift the analysis and interpretation part to a separate course (Financial Statement Analysis) in the second term. This is especially desirable since BS is an undergraduate course.You can give more time in this course to the basic accounting concepts like depreciation, adjustment and closing entries, inventory valuation methods etc.. ALSO discuss the structure of the income statement, balance sheet and cash flow statement for limited companies. 4. I think you can leave out the ratio analysis, cash flow analysis, IndAS etc Annual Reports & legal requirements relating to accounting and auditing for the second course that I suggest. 5. Keep the cash flow preparation in this course and shift the analysis to the second course.	

6. The course is recommended by DFB/SFB after due deliberation meeting minutes attached- Yes/No.

Yes. SFB on 20th April 2026

7. The course is designed after discussion with other relevant faculty in the institute working in same/ or allied areas- Yes/No

Yes

8. The course was circulated to all Heads/ Coordinators for their comments before sending it to experts- Yes/No.

Yes

Course Title	Economic and Business History	Course No.	MSL1xxx
Department	SME	Structure (L-T-P [C])	(3-0-0[3])
Offered for	BS in Management and Technology	Type	Core
Prerequisite	NA		

Objectives

1. To develop an understanding of the historical evolution of economic systems, institutions, and business practices across different periods.
2. To analyse how past economic events and business developments shape contemporary economic policies, global markets, and organizations.
3. To enable students to examine the emergence and transformation of business organizations, industries, and entrepreneurship across different historical periods.
4. To encourage students to critically evaluate economic and business decisions by understanding their historical context.

Learning Outcomes

1. Students will be able to understand and explain key stages in the evolution of economic systems and business practices, identifying major historical events, institutions, and trends across different periods.
2. Students will be able to critically analyse the influence of historical economic developments on present-day economic policies, global markets, and businesses.
3. Students will be able to explain how governments, institutions, and economic policies influenced business growth and economic change.
4. Students will be able to connect past economic and business developments to contemporary economic issues and decision-making.
5. Students will be able to examine the rise of industries, trade patterns, and entrepreneurship using historical examples.

Contents

1. **Introduction to Economic & Business History (5 Sessions)**
   Economic and Business History – Importance
   How Society, Economy & Technological Inventions Influence Business and Vice Versa

2. **Early Economic Systems and Pre-Industrial Economies (5 Sessions)**
   Agrarian economies – Life in a Village long ago, Who owned the land?
   Guild systems & early trade organizations – Groups of Workers
   Famous Trade Routes (like Silk Route), How Goods Moved Without Trucks or Trains

3. **Industrial Revolution (14 sessions)**
   Life Before Machines, Beginning of Machines Usage, Steam Engine, Spinning and weaving machines, Industrial Revolution
   Factory systems & urbanization - Rise of Factories & Private Property (Capitalism), Moving to Cities.
   Changes in Transport (Railways, Ships), Rise of Big Businesses
   Labor movements and working conditions – Life of Workers, Labor Movements (Intro to Socialism, Communism)
   Social changes in everyday life; Changes in Culture, and Thinking
   Global spread of industrialization

4. **History of Business (1850–1950) (8 Sessions)**
   Evolution of management thought and practices – Division of Labor (Taylor), Scientific Management (Taylor, Fayol) and its Flaws, Bureaucratic Management (Weber), Drucker's Task Management & Responsibilities
   Rise of large corporations - From Small Shops to Big Businesses
   Impact of World Wars on Business, Government and Business.

5. **Indian Business History (7 Sessions)**
   Role of Indian entrepreneurs during colonial rule
   Swadeshi movement and indigenous industries
   Impact of World Wars on Business in India

Economic & Business History

Checklist for the new course approval

1. **Justification for the proposal in line with the philosophy of the program** This is a core course in the newly launched program: BS in Management Technology in online mode. Its curriculum structure has been approved by the Senate in March 2026.

2. Total number of electives in the department/Centre/School already approved by the Senate.
   Currently, at UG level, there are ***no*** 100 level courses offered by SME, since there is no ongoing UG program. This course will be floated in the first semester.

3. Name of faculty members who will teach the proposed course
   Dr. Manu Kanchan and Dr. Jitesh Mohnot

4. If the course involves a lab component, please confirm whether adequate infrastructure resources are available to run the laboratory successfully. NA

5. **Experts comments on the proposed courses**

Name of the expert	Designation of the expert	Comments received	Action Taken
Dr. Niranjan Purohit	Associate Professor, Faculty of Management NLU Jodhpur	1. In Module -4, along with Taylor, Henry Fayol and Hawthorne Studies should also be covered.	Added Fayol in the Scientific Management topic. The Hawthorne Studies will be covered in OB/HR courses that BS students will study in 2nd/3rd year.
		2. In Module -3, there can be a discussion on socialism, capitalism, mixed economy; planned economy, free markets; manufacturing and services.	Some of these have been added into the topics of Rise of Factories and Labor Movement. Other topics will be taught in the 3rd semester course of Macroeconomics.
		3. In Module -5, please include Gandhian philosophy (trusteeship theory, self-sufficient villages, khadi movement). There can also be a discussion on Indian Ethos for businesses, with *dharma* as a guiding force for economic activities.	These will be touched upon in the Indian Management Systems course to be taught in Semester 4. Hence not added.

Dr. Vinay Sharma	Professor, Department of Management Studies IIT Roorkee	a) It may include the development of roads and economic systems in historical terms, starting from Sher Shah Suri and the Silk Route.	The Silk Route will be covered in the Trade Routes. As for the other topics, some of them will be covered in Indian Management System.
		b) Community-based economic systems and business development, which still exist prominently today, such as entire villages producing a single product (e.g., the national flag) and other examples like Gharat communities in the north-western Himalayas.	These topics are much more relevant to the Indian Management System course.
		c) The history of business is not about Henri Fayol and Frederick Taylor, that belongs to management. Business history should include Peter Drucker's work on task management and responsibilities, along with the historical development of industries such as oil companies. In the Indian context, the work of Rama Bijapurkar would also be very useful	The work of Rama Bijapurkar is much more focused on the consumption patterns of Indian population across classes, etc. It is less relevant for this course. As for the Peter Drucker's work on task management and responsibilities, it has added and will be touched upon in the Management/Business history topic.

6. The course is recommended by DFB/SFB after due deliberation meeting minutes attached- Yes/No.

Yes. SFB on 20th April 2026

7. The course is designed after discussion with other relevant faculty in the institute working in same/ or allied areas- Yes/No

Yes

8. The course was circulated to all Heads/ Coordinators for their comments before sending it to experts- Yes/No.

Yes

Principles of Marketing

Course Title	Principles of Marketing	Course No.	MSL1xxx
Department	SME	Structure (L-T-P [C])	(3-0-0 [3])
Offered for	BS in Management and Technology	Type	Core
Prerequisite	NA		

Objectives

This course provides an in-depth understanding of the principles and practices of marketing management. Students will explore key marketing concepts including market analysis, consumer behaviour, segmentation, targeting, and positioning. Real-world case studies will help students apply marketing theories to practical business situations.

Learning Outcomes

Upon successful completion of this course, students will be able to:

- Understand the core concepts and scope of marketing in a dynamic business environment.
- Analyse customer behaviour and market segments to make informed marketing decisions.
- Develop marketing plan applying the marketing mix framework (4Ps/7Ps).
- Evaluate the effectiveness of marketing strategies using appropriate metrics.

Contents

Introduction to Marketing (7 Sessions)

What is a market? What is marketing? Evolution of marketing. Core marketing concepts.

Marketing Strategy and Marketing Mix (7 Sessions)

Strategy vs. tactics, marketing plan, marketing strategy, introduction to the marketing mix, conventional and emerging frameworks in marketing.

Analysing Consumer and Business Markets (7 Sessions)

Consumer vs. business markets. What is consumer behaviour, the consumer decision process, the decision-making unit.

Segmentation, Targeting, and Positioning (7 Sessions)

Why is segmentation necessary? Micro Segmentation. Targeting strategies. What is positioning, frame of reference, points of parity and points of difference, perceptual mapping, positioning strategies and re-positioning.

Designing the Marketing Mix (8 Sessions)

Product and pricing strategy, channel and communication strategy.

Brand Management and Marketing ethics (3 Sessions)

Branding, Product lifecycle and brand strategies, Ethical issues in marketing

   Anuj Pal Kapoor, Manu Kanchan, Neha

4. **If the course involves a lab component, please confirm whether adequate infrastructure resources are available to run the laboratory successfully.**
   NA

5. **Experts comments on the proposed courses**

Name of the expert	Designation of the expert	Comments received	Action Taken
Prof. Ritu Mehta	Professor	Overall, looks fine. Made minor edits in track change mode, you can retain the number of sessions as needed.	The suggested changes have been incorporated into the syllabus. The suggested changes have been incorporated into the syllabus. The topics added: - The decision-making unit - Product Lifecycle
Prof Vinay Sharma	Professor	The principles of marketing have changed significantly. Segmentation has moved toward micro-segmentation, and targeting has become more visible. As a result all the 4 Ps are affected. I suggest that students should not be taught only segmentation, but rather micro-segmentation and targeting, and accordingly positioning and the 4 Ps.	The suggested changes have been incorporated into the syllabus. The Topic added: - Micro-segmentation

6. The course is recommended by DFB/SFB after due deliberation meeting minutes attached- Yes/No.

Yes. SFB on 20th April 2026

7. The course is designed after discussion with other relevant faculty in the institute working in same/ or allied areas- Yes/No

Yes

8. The course was circulated to all Heads/ Coordinators for their comments before sending it to experts- Yes/No.

Course Title	Statistics for Managers	Course No.	MSL1xxx
Department	SME	Structure (L-T-P [C])	(3-0-0[3])
Offered for	BS in Management and Technology	Type	Core
Prerequisite	NA		

Objectives

To introduce students to statistical thinking and its application in managerial decisions. The course builds progressively from data description to probability, estimation, and hypothesis formation, enabling students to analyse real-world business data with confidence.

Learning Outcomes

Students will learn to classify various data types and apply appropriate graphical and numerical summaries to effectively represent and interpret data. They will further develop their understanding by applying probability laws and standard distributions to model and manage business uncertainty. Building on this foundation, students will construct and interpret confidence intervals, apply the Central Limit Theorem, and go on to formulate and execute hypothesis statements while developing a clear understanding of the different types of errors involved in statistical testing.

Contents

1. **Data & Descriptive Statistics**: Types of data; frequency distributions; graphical displays (histogram, bar chart, box plot); measures of location and variability; correlation **(9 Sessions)**
2. **Probability & Probability Distributions**: Sample spaces; addition & multiplication laws; Bayes' theorem; discrete distributions (Binomial, Poisson); continuous distributions (Normal, Exponential) **(12 Sessions)**
3. **Sampling & Estimation**: Sampling methods; sampling distribution of mean; Central Limit Theorem; confidence intervals for mean and proportion; sample size determination **(9 Sessions)**
4. **Hypothesis Testing**: Null & alternative hypotheses; testing of mean and proportion, Type I & II errors, p-value **(9 Sessions)**

Statistics for Managers

Checklist for the new course approval

1. **Justification for the proposal in line with the philosophy of the program**
   This is a core course in the newly launched program: BS in Management Technology in online mode. Its curriculum structure has been approved by the Senate in March 2026.

2. **Total number of electives in the department/Centre/School already approved by the Senate.**
   Currently, at UG level, there are ***no*** 100 level courses offered by SME, since there is no ongoing UG program. This course will be floated in the first semester.

3. **Name of faculty members who will teach the proposed course**
   Deepak Srivastav, Monika Tanwar, Magesh Nagarajan

4. **If the course involves a lab component, please confirm whether adequate infrastructure resources are available to run the laboratory successfully.**
   NA

5. **Experts comments on the proposed courses**

Name of the expert	Designation of the expert	Comments received	Action Taken
Dr. Shovan Chowdhury	Professor	The content is fine for the course. You may need a few more sessions to cover hypothesis testing	Added extra sessions to recommended module.
Dr. Soudeep Deb	Associate Professor	The structure of the course looks great. I'll request you to include relevant and interesting case studies in the plan to ensure that the students get the best out of this course. You may also consider a recent textbook of ours (details given below) which focuses on these topics primarily, and takes into account a lot of case studies and datasets from Indian contexts.	Suggestions have been incorporated and book has been added to reference which includes cases and datasets

6. The course is recommended by DFB/SFB after due deliberation meeting minutes attached- Yes/No.

Yes. SFB on 20th April 2026

7. The course is designed after discussion with other relevant faculty in the institute working in same/ or allied areas- Yes/No

Yes

8. The course was circulated to all Heads/ Coordinators for their comments before sending it to experts- Yes/No.

Yes

Course Title	Foundations of Computing	Course No.	MSL1xxx
Department	SME	Structure (L-T-P [C])	(3-0-0[3])
Offered for	BS in Management and Technology	Type	Core
Prerequisite	NA		

Objectives

1. Develop problem-solving abilities by applying core programming concepts to real-world tasks and form a foundation for software development.
2. Encourage hands-on, project-based learning to reinforce understanding and improve coding proficiency.

Learning Outcomes

After completing this course, learners are expected to:

1. Develop foundational programming skills using Python, including variables, data types, control structures, and functions.
2. Implement working programs for data visualization and basic web applications.
3. Learn the programming process and apply it to develop software.

Contents

1. Introduction to foundations of computing (5 Sessions)

- Setting Up Your Programming Environment, Troubleshooting Installation Issues, Running Python Programs from a Terminal
- Variables and Simple Data Types: Variables, Strings, Numbers, Comments

2. Lists & Conditional Statements (8 Sessions)

- Definition, Changing, Adding, and Removing Elements, Looping Through a List
- Conditional Tests, Using IF Statements with Lists

3. Dictionaries & User Input and Loops (6 Sessions)

- Working with Dictionaries, Looping Through a Dictionary, Nesting
- Input Function, While Loops, While Loop with Lists and Dictionaries

4. Functions & Classes (12 Sessions)

- Functions, Passing Arguments, Return Values, Passing a List, Passing an Arbitrary Number of Arguments, Storing functions in Modules, Styling functions
- Classes and Instances, Inheritance, Importing Classes, Python Standard Library

5. Files and Exceptions & Data Visualization (8 Sessions)

- Reading & Writing to a File, Exceptions, Storing Data
- Matplotlib, line graph, histogram, CSV file format, JSON format, Web API.

NA

Experts comments on the proposed courses

Name of the expert	Designation of the expert	Comments received	Action Taken
Dr. Veena Bansal	Professor, IIT Kanpur	The expert noted a mismatch between the course content and the stated learning outcomes, that software development processes and web application development are included in the outcomes but not adequately reflected in the course content. A revision was suggested. The expert also recommended changing the action verb "Strengthen" to "Develop" in the Objectives section for better pedagogical framing. In the Learning Outcomes section, the opening verb "Describe" was suggested for replacement with "Learn" to better reflect the intended outcome.	Following the expert's suggestions, the terms software development process and web application development have been removed from the Learning Outcomes section. Instead, terms related to programming and implementing programs to create basic applications have been added, and the corresponding topics have also been incorporated into the course content. All suggested changes regarding the action verbs and opening verbs have been made in the revised outline.
Dr. Praveen Ranjan Srivastava	Professor, IIM Rohtak	The expert emphasized that the course develops computational thinking as a managerial capability,	The expert did not recommend any major changes or modifications.

		enabling students to apply programming concepts to structured problem-solving, process automation, and data-driven decision-making. The course connects core programming constructs with business applications such as financial modeling, business process design, data governance, and digital platforms. It was also noted that the course builds a foundation for advanced areas like business analytics, machine learning, and digital transformation. Overall, the course prepares management students to move beyond tool usage toward designing technology-enabled decision systems for leadership roles.	

The course is recommended by DFB/SFB after due deliberation meeting minutes attached- Yes/No.

Yes. SFB on 20th April 2026

The course is designed after discussion with other relevant faculty in the institute working in same/ or allied areas- Yes/No

Course Title	Algorithmic Thinking in Business	Course No.	MSL1xxx
Department	SME	Structure (L-T-P [C])	(3-0-0[3])
Offered for	BS in Management and Technology	Type	Core
Prerequisite	NA		

Objectives

This course introduces commonly used data structures and explains their relevance to business applications, using a no-code approach that emphasizes conceptual clarity, visual understanding, and real-world decision contexts rather than programming syntax. It also introduces commonly used algorithmic techniques and demonstrates how they support business problem-solving that focuses on logic, managerial interpretation, and practical application without requiring prior coding knowledge.

Learning Outcomes

After completing this course, learner will be able to:

1. Explain common data structures and their business relevance using a no-code approach.
2. Identify suitable data structures and algorithms for business problems without programming.
3. Compare algorithmic approaches conceptually from a managerial perspective.
4. Apply structured logical thinking to business scenarios using a no-code approach.

Contents

1. **Introduction (7 lectures)**: Algorithms, modelling business process through flowchart and pseudocode, variables, functions
2. **Linear data structures (8 lectures)**: Arrays, Linked List, Stack, Queue, Basic operations, Applications in inventory tracking, audit trails, and service systems.
3. **Non-linear data structures (8 lectures)**: Tree, Heap, Hash tables, Graphs, Business applications such as organizational hierarchies, social media analysis, and cybersecurity.
4. **Search algorithms (8 lectures):** Linear search, Binary search, Tree and graph traversals, Applications in customer database retrieval, product lookup, network routing.
5. **Sorting algorithms (8 lectures):** Bubble, selection, insertions, merge, quick sort, business use cases in inventory sorting, vendor ranking.

Algorithmic Thinking in Business

Checklist **for the new course approval**

1. **Justification for the proposal in line with the philosophy of the program**
   a. **This is a core course in the newly launched program: BS in Management Technology in online mode. Its curriculum structure has been approved by the Senate in March 2026.**

2. **Total number of electives in the department/Centre/School already approved by the Senate.**
   a. Currently, at UG level, there are ***no*** 100 level courses offered by SME, since there is no ongoing UG program. This course will be floated in the first semester.

3. **Name of faculty members who will teach the proposed course**
   a. Dr. Aman Pathak and Dr. Deepak Kumar Saxena

4. **If the course involves a lab component, please confirm whether adequate infrastructure resources are available to run the laboratory successfully.**
   a. NA

5. **Experts comments on the proposed courses**

Name of the expert	Designation of the expert	Comments received	Action Taken
Prof. Veena Bansal	Professor, IIT Kanpur	The outline looks good in its current form.	No action required.
Prof. Praveen Ranjan Srivastav	Professor, IIM Rohtak	The proposed course structure is academically strong; however, for management students - especially in a compulsory program - the focus should shift from deep technical implementation to business relevance and applied understanding. While topics such as algorithms, linear and non-linear data structures, search, and sorting are important, they should be taught from the perspective of how digital systems support managerial decision-making rather than from a pure computer science orientation. The introduction module can be strengthened by emphasizing computational thinking for managers and modeling real business processes through flowcharts, such as order processing or loan approval systems. In linear data structures, arrays, stacks, and queues are highly relevant for operational workflows like inventory	The suggestions are aligned with the philosophy of the course. Suggested applications have been included in relevant sections.

		tracking, audit trails, and service systems, whereas detailed internal mechanics of linked lists may be reduced. Similarly, in non-linear structures, trees and graphs should be connected to organizational hierarchies, supply chain networks, and social media analysis, while complex heap construction and hashing formulas can be simplified. Search and sorting algorithms should be explained conceptually with comparisons of efficiency and scalability, using examples such as customer database retrieval, vendor ranking, credit scoring, and performance evaluation systems, rather than focusing heavily on technical derivations. Reducing excessive technical depth in certain areas would create space for business case discussions, simulation exercises, and a small integrative project that combines data structures, search, and sorting in a practical managerial scenario. Overall, the course should aim to develop structured problem-solving ability, digital literacy, and system-level thinking among management students, preparing them to understand and manage technology-driven business environments effectively.	
Prof. Praveen Ranjan Srivastav	Professor, IIM Rohtak	To enhance contemporary relevance, the course may incorporate basic database concepts, introductory SQL exposure, data visualization and dashboards, data privacy and cybersecurity awareness, and a brief introduction to AI applications in business.	These topics are covered in separate courses.

6. The course is recommended by DFB/SFB after due deliberation meeting minutes attached- Yes/No.

Yes. SFB on 20th April 2026

7. The course is designed after discussion with other relevant faculty in the institute working in same/ or allied areas- Yes/No

Yes

8. The course was circulated to all Heads/ Coordinators for their comments before sending it to experts- Yes/No.

Annexure -2: Approved Concept Note and curriculum structure of SME's BS program

B.S. in Management and Technology

Concept Note

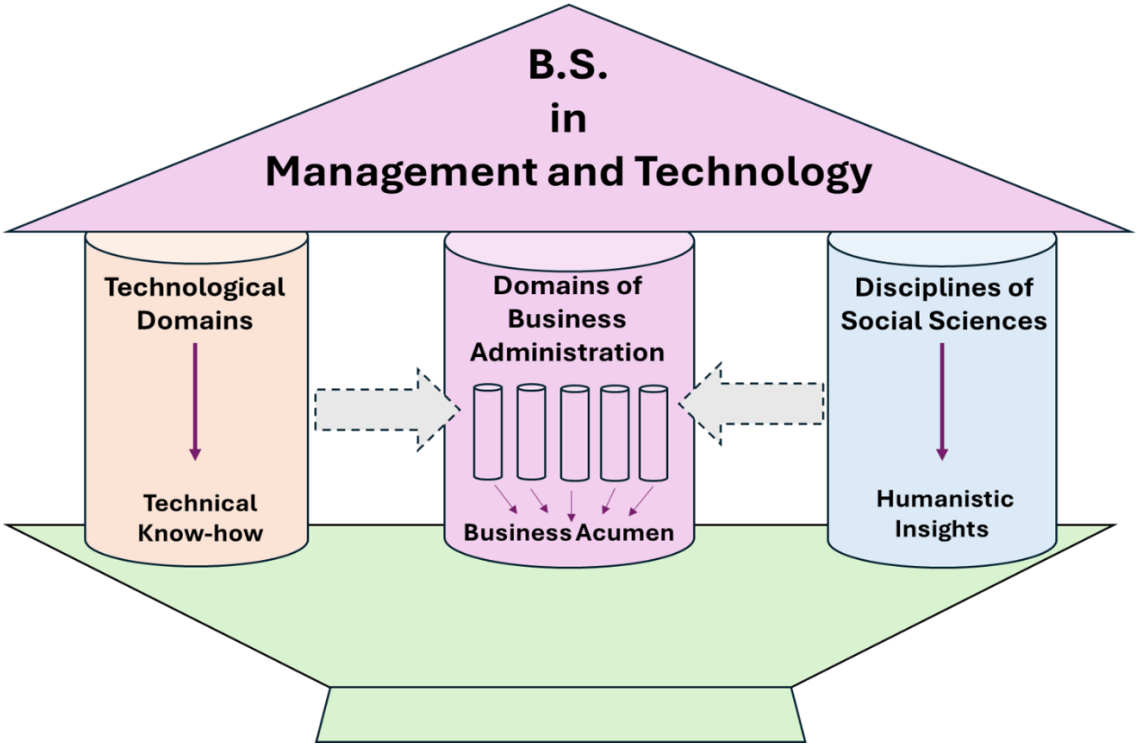

Four-year, Online and Blended Undergraduate Program, offered by*

School of Management and Entrepreneurship, IIT Jodhpur

*(*Blended in terms of Synchronous and Asynchronous Delivery)*

Underlying Philosophy of the Program

IIT Jodhpur's new four-year B.S. in Management and Technology is driven by the idea that today's world doesn't just need specialists with myopic vision. What we really need are managers who can bridge disciplines to lead in high velocity environments wherein technological, business and socio-political domains converge. To solve the pressing problems facing the world, we believe that grand challenges of tomorrow will require mangers to blend three aspects into everything they do - humanistic insight, technological know-how, and business acumen. Therefore, the program is based on three pillars constituting domains of technology, social sciences and business administration ***[figure 1].***

The programme's foundation in social sciences ensures that students begin with broad exposure—ethical reasoning, human values, history, communication, critical thinking, social contexts—that ground their understanding of business in human societies. From there, technology management courses serve to link emerging tools, digital platforms, data, AI, innovation and systems thinking to managerial challenges, enabling students to understand *how* technology transforms markets, work, and institutions.

Furthermore, study of business management functions — marketing, finance, human resources, operations, strategy — provides the operational toolkit: students learn both theory and practice of how firms create value, allocate resources, manage people, and understand customers. Meanwhile, skilling courses (written and oral communication; reading and crafting capabilities;) ensure that graduates are not only intellectually well-rounded, but also possess the practical competencies required in real workplaces.

The philosophy of this undergraduate program, thus is integrative: to produce agile, ethical, and socially conscious managers who can operate at the intersection of technology, business, and society; to foster adaptability, problem solving, lifelong learning; and to prepare students for diverse roles — whether in established firms and business groups; startups, policy think tanks, or further studies — empowered with both depth and breadth.

Program Objectives

1. To prepare students for leadership, innovation, and entrepreneurship with a focus on sustainability, ethics, and global business perspectives.
2. To provide students with a strong foundation in economics, business history, and social sciences for nuanced understanding of management in diverse contexts.
3. To equip students with modern technological, analytical, and data-driven tools for effective business decision-making.
4. To foster interdisciplinary knowledge across marketing, finance, operations, HR, and strategy for well-rounded managerial competence.

Learning Outcomes from the program

1. Students will demonstrate the ability to analyse economic, social, and business issues using critical and creative thinking skills.
2. Students will apply data analytics, AI, and digital economy tools to solve real-world business problems.
3. Students will integrate knowledge from marketing, finance, operations, HR, and strategy to design and implement business solutions.
4. Students will exhibit ethical awareness, global perspective, and entrepreneurial orientation in managerial decision-making.

Graduate Outcomes

Year	Graduate Outcomes
At the end of year 1	Basic understanding of fundamentals of business management with and appreciation of role of technology and social sciences.
At the end of year 2	Integrated understanding of various management domains and implications of technology and social sciences.
At the end of year 3	Holistic managerial understanding across multiple functional domains and its integration with advanced technology applications.
At the end of year 4	Specialized and in-depth understanding of a functional domain of business with role of emerging business technologies.

Curriculum Structure

The curriculum is designed to provide a **broad foundation** in management, technology, and social sciences, with exposure to domain specialized courses. Course and credit distribution is noted in Table 1 where each course is 3-credits. Overall, the BS program shall comprise total of **47 courses** covering **141 credits** over **8** semesters.

Table 1: Curriculum Structure

S.No.	Nature of Courses	Number of courses	Credits per course	Total Credits	Weightage
1	Management Foundation Courses	20	3	60	42.6%
2	Technology Courses	9	3	27	19.1%
3	Social Science Courses	9	3	27	19.1%
4	Advanced Courses	9	3	27	19.1%
Total (1 + 2 + 3 + 4)		**47**	**3**	**141**	100%

Semester-wise breakup of credits

The BS in Management and Technology follows a semester-wise structure spread over 8 semesters ***[Table 2]***. In the first three years, students build a strong foundation in management, social sciences, and technology. In the final year, students go through domain specialized courses to deepen their understanding of business domains. In total, the curriculum comprises **141 credits**, carefully balanced across 8 semesters to ensure both foundation and applied experience.

Table 2: Semester-wise credit structure

Year	Semester	Number of courses	Total credits
1	1	6	18
	2	6	18
2	3	6	18
	4	6	18
3	5	6	18
	6	6	18
4	7	6	18
	8	5	15
Total			**141**

Table 3: Domain-wise courses

S. No.	Technological Domains	Social Sciences Domain	Domains of Business Administration				
			Marketing	HR	Operations and IS	Finance and Accounting	Entrepreneurship and Strategy
1	Foundations of Computing	Economic and Business History	Principles of Marketing	Micro Organizational Behavior	Statistics for Managers	Financial Accounting	Foundations of Entrepreneurship
2	Algorithmic Thinking in Business	Microeconomics	Consumer Behavior in Marketing	Macro Organizational Behavior	Optimization Techniques in Management	Cost Accounting	Design Thinking in Business
3	Database Management Systems	Macroeconomics	Nurturing and Managing Brands	Human Resource Management	Business Research and Analysis	Financial Management - I	Competition and Strategy
4	Machine Learning in Business	Introduction to Sociological Thought	Digital Marketing Analytics & Optimization	Human-AI Collaboration at Work	Operations Management for Managers	Financial Management - II	International Business
5	AI Applications in Business	Introduction to Psychology	Marketing of Services		Digital Enterprise Management	Money, Banking and Financial Markets	Leadership and Corporate Governance
6	Visualization and Storytelling of Business data	Environment Sustainability and Business			Technology Forecasting and Assessment	Introduction to FinTech	Strategies for Firm Growth
7	Generative and Agentic AI in Business	Indian Management Systems			Project Management		
8	Industry 5.0	Digital Economy			Supply Chain Management		
9	Big Data and Cloud Computing	Legal Aspects, taxation and IPR

Programme Eligibility

Essential Education Qualification

- Candidates must have successfully completed 10+2 or equivalent from a recognized board.
- Minimum aggregate of 60% marks (or equivalent CGPA) in 10+2 examination.

Desirable

- Mathematics at the 10+2 level is desirable for proper grasp of quantitative and technology management courses.

Selection Process

- Shortlisting based on academic qualifications and performance in a qualifying test (JEE Main/CUET-UG/Entrance Test).

Proposed Intake

- Academic year 2026-27: Minimum 500 students per cohort. 2 cohorts per year

Grading, GPA and CGPA Criteria

- Guidelines of B.S. programs at IITJ will be followed

Stackable Programme Structure (NEP-Aligned)

The B.S. in Management and Technology (Online) follows a multi-exit, stackable model *[Table 4]* aligned with the National Education Policy (NEP 2020).

Table 4: Exit Pathways

Exit Level	Academic Award	Credits Earned	Duration	Indicative Outcomes
Year 1	Certificate in Business Fundamentals	36 credits	2 Semesters	Basic understanding of fundamentals of business management with and appreciation of role of technology and social sciences.
Year 2	Diploma in Management & Technology	72 credits	4 Semesters	Integrated understanding of various management domains and implications of technology and social sciences.
Year 3	Bachelor of Science (3 years) in Management & Technology	108 credits	6 Semesters	Holistic managerial understanding across multiple functional domains and its integration with advanced technology applications.
Year 4	Bachelor of Science (4 years) in Management & Technology	141 credits	8 Semesters	Specialized and in-depth understanding of a functional domain of business with role of emerging business technologies.

Online Modalities, Faculty Live sessions and Doubt clearing sessions

- 1 credit is equal to 13 sessions of 50 minutes each. So, a 3-credit course shall amount to 39 sessions of 50 minutes each.
- Primary delivery of the courses will be in asynchronous mode, wherein pre-recorded content by faculty will be provided to students.

- **Faculty Live sessions**
  - **Flipped classroom:** For each 3-credit course, there will be 13 live sessions of 50 minutes each, scheduled on weekends, **delivered by IIT faculty.**
  - **Proprietary Case Studies** material will be distributed to students so that they pre-read the case before the live sessions for fruitful discussion in online mode.

- **Doubt-clearing sessions**
  - 13 sessions of 50 minutes each, for every course - taken by Teaching Assistants**.**

- **Campus Immersion**
  Twice (optional)
